

User Journey Map

Project: MoFlow: Smart Recurring Bill Payments Platform

Document Type: User Journey Map

Primary Persona: Ama Mensah (Salaried Professional)

Role: Business Analyst

Version: 1.0

Date: July 2026

Introduction

This User Journey Map illustrates the end-to-end experience of a typical MoFlow user as they discover, adopt, and use the platform to manage recurring mobile money payments. The journey identifies the user's goals, actions, emotions, pain points, and opportunities for improvement at each stage of the experience.

Understanding the user journey enables the product team to design solutions that reduce friction, improve usability, and deliver greater value throughout the customer lifecycle.

Persona Overview

Name: Ama Mensah

Age: 30

Occupation: Human Resource Officer

Location: Accra, Ghana

Technology Level: Intermediate

Primary Device: Android Smartphone

Goals

- Never miss an important payment.
- Save time managing monthly bills.
- Receive reminders before payments are due.
- Easily track completed payments.

Frustrations

- Forgetting payment dates.
- Manually repeating the same payments every month.
- Difficulty keeping payment records.

- Anxiety about failed or missed transactions.

User Journey

Journey Stage	User Goal	User Actions	Thoughts	Emotions	Pain Points	Opportunities
1. Awareness	Avoid missing recurring bills	Misses a utility payment and begins searching for a better solution	"There has to be an easier way to manage my bills."	Frustrated	Missed due dates, penalties, stress	Educate users through targeted marketing and awareness campaigns.
2. Discovery	Find a trustworthy solution	Learns about MoFlow through social media and recommendations	"This might solve my problem."	Hopeful	Unsure whether the platform is secure	Clearly communicate security, reliability, and supported payment providers.
3. Onboarding	Create an account quickly	Downloads the app, registers, verifies identity, and links a mobile money account	"The registration process is straightforward."	Confident	Too many verification steps could cause drop-off	Keep onboarding simple with clear instructions and progress indicators.
4. Schedule Payment	Automate recurring bills	Selects a biller, enters payment details, chooses a monthly schedule, and confirms	"Now I don't have to remember this every month."	Relieved	Confusion about scheduling options	Provide intuitive forms, clear labels, and helpful guidance.

5. Payment Reminder	Stay informed before payments	Receives a reminder before the scheduled payment date	"Good, I still have time to make changes if needed."	Reassured	Too many notifications may become annoying	Allow users to customise reminder frequency and notification channels.
6. Automatic Payment	Complete payment successfully	Scheduled payment is processed automatically	"I hope the payment goes through successfully."	Slightly Anxious	Payment failures due to insufficient balance or network issues	Provide real-time payment status updates and retry mechanisms.
7. Confirmation	Verify payment completion	Receives confirmation notification and digital receipt	"Great! Everything worked."	Satisfied	Difficulty locating receipts in other apps	Offer downloadable receipts and searchable payment history.
8. Ongoing Management	Monitor and manage recurring payments	Reviews dashboard, edits schedules, pauses or cancels payments when necessary	"Managing my bills is much easier now."	Confident	Managing multiple recurring payments can become overwhelming	Provide filters, categories, calendar views, and spending summaries.
9. Loyalty & Advocacy	Continue using the platform and recommend it	Continues using MoFlow and recommends it to friends and family	"This app has made my financial life much easier."	Delighted	Limited advanced financial insights	Introduce budgeting tools, spending analytics, and loyalty rewards.

Key Pain Points

The journey highlights several user challenges that informed the product requirements:

- Forgetting recurring payment dates.
- Repeating manual payment processes every month.
- Limited visibility into upcoming financial obligations.
- Anxiety regarding failed transactions.
- Difficulty managing multiple recurring payments.
- Poor access to historical payment records.

Business Opportunities

The analysis identifies opportunities for MoFlow to improve user experience and create business value:

- Automate recurring payments.
- Send timely payment reminders.
- Provide real-time payment notifications.
- Offer a centralized dashboard for payment management.
- Deliver searchable payment history and downloadable receipts.
- Enable users to edit, pause, or cancel recurring payment schedules.
- Introduce financial insights and budgeting tools in future releases.

Journey Insights

The user journey demonstrates that the greatest customer value comes from reducing cognitive effort and increasing confidence in recurring financial management. Users are primarily motivated by convenience, reliability, and peace of mind rather than simply making digital payments.

The most critical moments in the journey are onboarding, payment scheduling, and payment confirmation. These stages should receive particular attention during product design and usability testing to ensure a seamless experience.

Recommendations

Based on this journey analysis, the following recommendations are proposed:

- Minimise onboarding friction while maintaining security.
- Simplify the recurring payment setup process.
- Provide clear payment status updates.
- Allow users to customise reminder preferences.
- Design an intuitive dashboard for managing recurring obligations.
- Continuously gather customer feedback to refine the user experience.
- Prioritise accessibility and mobile-first design principles.

Conclusion

The User Journey Map provides a comprehensive view of the end-to-end customer experience for MoFlow. It identifies the motivations, challenges, and expectations of users at every stage of their interaction with the platform and highlights opportunities to improve both customer satisfaction and business outcomes.

These insights will guide product design, requirements definition, user story development, and solution validation throughout the MoFlow project lifecycle.
