

Functional Requirements Specification (FRS)

Project: MoFlow: Smart Recurring Bill Payments Platform

Document Type: Functional Requirements Specification (FRS)

Role: Business Analyst

Version: 1.0

Date: July 2026

1. Introduction

1.1 Purpose

This document defines the functional requirements for the MoFlow Smart Recurring Bill Payments Platform. It describes the system capabilities required to enable users to automate recurring mobile money payments while providing a secure, reliable, and user-friendly experience.

The functional requirements will guide product design, software development, testing, and solution validation.

1.2 Scope

The system shall allow users to:

- Register and authenticate
- Link mobile money accounts
- Create recurring payments
- Manage payment schedules
- Receive notifications
- View payment history
- Manage user profiles
- Access an administrative dashboard

2. Functional Requirements

User Management

FR-001 User Registration

The system shall allow new users to create an account using their mobile number and email address.

Priority: High

FR-002 User Authentication

The system shall allow registered users to securely log in using their credentials.

Priority: High

FR-003 Password Recovery

The system shall allow users to reset forgotten passwords through a verification process.

Priority: High

FR-004 User Profile

The system shall allow users to update their personal information.

Priority: Medium

FR-005 Notification Preferences

The system shall allow users to configure notification preferences.

Priority: Medium

Mobile Money Integration**FR-006 Link Mobile Money Account**

The system shall allow users to securely link one or more mobile money accounts.

Priority: High

FR-007 Verify Linked Account

The system shall validate linked mobile money accounts before activation.

Priority: High

FR-008 Manage Linked Accounts

Users shall be able to add or remove linked payment accounts.

Priority: Medium

Recurring Payments

FR-009 Create Recurring Payment

Users shall be able to schedule recurring payments.

Priority: High

FR-010 Select Payment Frequency

Users shall be able to choose:

- Daily
- Weekly
- Monthly
- Quarterly
- Annually

Priority: High

FR-011 Select Start Date

Users shall specify when recurring payments begin.

Priority: High

FR-012 Select End Date

Users may optionally specify an end date.

Priority: Medium

FR-013 Edit Payment Schedule

Users shall edit existing recurring payment schedules.

Priority: High

FR-014 Pause Payment Schedule

Users shall temporarily suspend recurring payments.

Priority: Medium

FR-015 Resume Payment Schedule

Users shall reactivate paused schedules.

Priority: Medium

FR-016 Cancel Payment Schedule

Users shall permanently cancel recurring payments.

Priority: High

Payment Processing

FR-017 Automatic Payment Execution

The system shall automatically process payments according to the configured schedule.

Priority: High

FR-018 Payment Validation

The system shall validate payment details before processing.

Priority: High

FR-019 Payment Status

The system shall display payment status.

Possible statuses include:

- Pending
- Processing
- Successful
- Failed

Priority: High

FR-020 Failed Payment Handling

The system shall notify users when scheduled payments fail.

Priority: High

FR-021 Payment Retry

The system shall allow retrying failed payments.

Priority: Medium

Notifications

FR-022 Upcoming Payment Reminder

The system shall notify users before scheduled payments.

Priority: High

FR-023 Successful Payment Notification

Users shall receive confirmation after successful payments.

Priority: High

FR-024 Failed Payment Notification

Users shall receive alerts when payments fail.

Priority: High

FR-025 Schedule Modification Notification

The system shall notify users whenever a payment schedule changes.

Priority: Medium

Dashboard

FR-026 Dashboard Overview

Users shall access a dashboard displaying:

- Upcoming payments
- Active schedules
- Completed payments
- Failed payments

Priority: High

FR-027 Upcoming Payments List

The dashboard shall display future scheduled payments.

Priority: High

FR-028 Recent Transactions

The dashboard shall display recent payment activity.

Priority: Medium

FR-029 Spending Summary

The dashboard shall summarize recurring payment totals.

Priority: Medium

Payment History

FR-030 Payment History

Users shall access historical recurring payments.

Priority: High

FR-031 Payment Details

Users shall view detailed payment information.

Priority: Medium

FR-032 Search Payment History

Users shall search historical transactions.

Priority: Medium

FR-033 Filter Payment History

Users shall filter history by:

- Date
- Status
- Category

Priority: Medium

FR-034 Download Receipt

Users shall download payment receipts.

Priority: Low

Security

FR-035 Session Timeout

Inactive sessions shall automatically expire.

Priority: High

FR-036 Multi-Factor Authentication

The system shall support optional multi-factor authentication.

Priority: Medium

Administration**FR-037 User Management**

Administrators shall manage registered users.

Priority: High

FR-038 System Monitoring

Administrators shall monitor payment activity.

Priority: High

FR-039 Audit Logs

Administrators shall access audit logs for system activities.

Priority: High

FR-040 Reporting

Administrators shall generate reports showing:

- Active users
- Payment volumes
- Payment success rates
- Failed transactions

Priority: Medium

Functional Requirement Priorities

Priority	Description
High	Essential for MVP release
Medium	Important but can follow MVP
Low	Future enhancement

Functional Dependencies

Several requirements depend on others being completed first.

Requirement	Depends On
FR-006	FR-001, FR-002
FR-009	FR-006
FR-017	FR-009
FR-022	FR-009
FR-026	FR-009
FR-030	FR-017
FR-040	FR-017

Conclusion

The Functional Requirements Specification defines the core system capabilities required to deliver the MoFlow Smart Recurring Bill Payments Platform. These requirements provide a clear foundation for solution design, Agile backlog creation, development, quality assurance, and user acceptance testing.
