

Acceptance Criteria Document

Project: MoFlow: Smart Recurring Bill Payments Platform

Document Type: Acceptance Criteria Specification

Role: Business Analyst

Version: 1.0

Methodology: Agile Scrum

Date: July 2026

1. Introduction

1.1 Purpose

This document defines the acceptance criteria for the MoFlow Smart Recurring Bill Payments Platform. Acceptance criteria describe the conditions that must be met before a user story is considered complete and accepted by stakeholders.

The criteria are written using the Given-When-Then format to support development, quality assurance, and user acceptance testing.

Epic 1 - User Registration & Authentication

AC-001 - User Registration (US-001)

Given a visitor is on the registration page

When they provide a valid name, email address, mobile number, and password and submit the form

Then a new user account shall be created successfully.

AC-002 - Login (US-002)

Given a registered user exists

When they enter valid login credentials

Then they shall be granted access to the application dashboard.

AC-003 - Password Reset (US-003)

Given a registered user has forgotten their password

When they complete identity verification and create a new password

Then they shall be able to log in using the new password.

AC-004 - Update Profile (US-004)

Given a logged-in user

When they update their profile information

Then the system shall save and display the updated information.

Epic 2 - Mobile Money Account Management

AC-005 - Link Mobile Money Account (US-005)

Given a logged-in user

When they provide valid mobile money account details

Then the account shall be linked successfully after verification.

AC-006 - Manage Linked Accounts (US-006)

Given a user has linked payment accounts

When they remove or add an account

Then the system shall update the account list accordingly.

Epic 3 - Recurring Payments

AC-007 - Create Recurring Payment (US-007)

Given a verified user with a linked mobile money account

When they enter valid payment details and save the schedule

Then a recurring payment schedule shall be created successfully.

AC-008 - Select Payment Frequency (US-008)

Given a user is creating a recurring payment

When they select Daily, Weekly, Monthly, Quarterly, or Annually

Then the system shall save the selected payment frequency.

AC-009 - Edit Payment Schedule (US-009)

Given an active recurring payment exists

When the user modifies the schedule and saves the changes

Then the updated schedule shall be reflected immediately.

AC-010 - Pause Payment Schedule (US-010)

Given an active recurring payment exists

When the user selects Pause

Then future scheduled payments shall be suspended until resumed.

AC-011 - Resume Payment Schedule (US-011)

Given a paused recurring payment exists

When the user selects Resume

Then future scheduled payments shall continue according to the schedule.

AC-012 - Cancel Payment Schedule (US-012)

Given an active recurring payment exists

When the user confirms cancellation

Then the recurring payment schedule shall be permanently cancelled.

Epic 4 - Payment Processing

AC-013 - Automatic Payment Execution (US-013)

Given a recurring payment is scheduled
When the scheduled execution time arrives
Then the system shall automatically initiate the payment.

AC-014 - Payment Confirmation (US-014)

Given a payment is successful
When processing is completed
Then the user shall receive a payment confirmation notification.

AC-015 - Failed Payment Notification (US-015)

Given a scheduled payment fails
When payment processing ends unsuccessfully
Then the user shall receive a notification explaining the failure.

AC-016 - Retry Failed Payment (US-016)

Given a payment has failed
When the user selects Retry
Then the system shall attempt payment processing again.

Epic 5 - Dashboard & Payment History

AC-017 - Dashboard Overview (US-017)

Given a logged-in user
When the dashboard loads
Then it shall display active schedules, upcoming payments, recent transactions, and payment summaries.

AC-018 - Upcoming Payments (US-018)

Given future scheduled payments exist
When the dashboard is opened
Then all upcoming payments shall be displayed.

AC-019 - Payment History (US-019)

Given completed payments exist

When the user opens Payment History

Then all historical transactions shall be displayed.

AC-020 - Search Payment History (US-020)

Given payment history exists

When the user searches for a payment

Then matching transactions shall be returned.

AC-021 - Filter Transactions (US-021)

Given payment history exists

When the user filters by date, biller, or payment status

Then only matching transactions shall be displayed.

AC-022 - Download Receipt (US-022)

Given a completed payment exists

When the user selects Download Receipt

Then a receipt shall be generated and downloaded.

Epic 6 - Notifications

AC-023 - Payment Reminder (US-023)

Given a scheduled payment is approaching

When the configured reminder time is reached

Then the user shall receive a reminder notification.

AC-024 - Notification Preferences (US-024)

Given a user updates notification settings
When the settings are saved
Then future notifications shall follow the selected preferences.

Epic 7 - Security

AC-025 - Secure Authentication (US-025)

Given a user logs into the application
When authentication succeeds
Then secure access shall be granted.

AC-026 - Multi-Factor Authentication (US-026)

Given multi-factor authentication is enabled
When the user logs in
Then they shall successfully complete the second verification step before access is granted.

AC-027 - Automatic Logout (US-027)

Given a user has been inactive for the configured timeout period
When the timeout expires
Then the user shall be automatically logged out.

Epic 8 - Administration

AC-028 - User Management (US-028)

Given an administrator is logged in
When they manage user accounts
Then the requested changes shall be saved successfully.

AC-029 - Monitor Transactions (US-029)

Given payment transactions are being processed
When the administrator opens the monitoring dashboard
Then current transaction statuses shall be displayed.

AC-030 - Generate Reports (US-030)

Given reporting data exists
When an administrator requests a report
Then the system shall generate the selected report successfully.

Epic 9 - Future Enhancements

AC-031 - Spending Insights (US-031)

Given sufficient payment history exists
When the user opens Spending Insights
Then recurring spending trends shall be displayed.

AC-032 - Budget Monitoring (US-032)

Given a budget has been configured
When recurring payments are processed
Then the dashboard shall compare spending against the budget.

AC-033 - Payment Categories (US-033)

Given recurring payments exist
When the user assigns categories
Then payments shall be grouped accordingly.

AC-034 - Favourite Billers (US-034)

Given frequently used billers exist
When the user marks a biller as a favourite
Then the biller shall appear in the favourites list.

AC-035 - Payment Calendar (US-035)

Given recurring payments are scheduled
When the user opens the calendar view
Then all upcoming payment dates shall be displayed on the calendar.

Acceptance Criteria Standards

Every user story should satisfy the following quality conditions before it is accepted:

- Functional requirements are fully implemented.
- Validation rules are enforced.
- Business rules are satisfied.
- Error handling works as expected.
- Security requirements are met.
- Relevant notifications are generated.
- Required data is stored correctly.
- The feature passes Quality Assurance (QA) testing.
- The Product Owner approves the completed functionality.

Relationship to Other Project Documents

This document is directly linked to:

- Business Requirements Document (BRD)
- Functional Requirements Specification (FRS)
- Business Rules Catalog
- User Stories Catalog
- Requirements Traceability Matrix (RTM)
- QA Test Cases
- Jira Product Backlog

Each acceptance criterion provides measurable conditions that verify a user story has been successfully implemented and can be used by QA engineers during testing.

Conclusion

This Acceptance Criteria Specification provides clear, testable conditions for each user story in the MoFlow project. By defining expected outcomes using the Given-When-Then format, the document establishes a shared understanding between business stakeholders, developers, testers, and product managers. It also supports consistent sprint delivery, quality assurance, and user acceptance testing by ensuring that every implemented feature meets agreed business expectations.
