

Stakeholder Analysis

Project: MoFlow: Smart Recurring Bill Payments Platform

Role: Business Analyst

Version: 1.0

Date: July 2026

Introduction

Effective stakeholder management is essential to the successful delivery of any product. Stakeholders influence project priorities, define business needs, validate requirements, provide feedback throughout development, and determine whether the delivered solution meets business objectives.

This document identifies the stakeholders involved in the MoFlow project, analyses their roles, interests, influence, and expectations, and defines an engagement strategy to support effective communication and collaboration throughout the product development lifecycle.

Purpose

The objectives of this stakeholder analysis are to:

- Identify all internal and external stakeholders.
- Understand stakeholder needs and expectations.
- Assess stakeholder influence and interest.
- Define stakeholder responsibilities.
- Develop an appropriate communication and engagement strategy.
- Reduce project risks arising from poor stakeholder alignment.

Stakeholder Needs Analysis

Executive Sponsor

Needs

- Return on investment
- Product adoption
- Strategic alignment
- Timely delivery

Product Manager

Needs

- Well- defined requirements
- Prioritised backlog
- Clear business objectives
- Stakeholder alignment

UX/UI Designer

Needs

- User personas
- User journeys
- Functional requirements
- Business rules

Software Engineers

Needs

- User stories
- Acceptance criteria
- API requirements
- Process flows

QA Engineer

Needs

- Test scenarios
- Acceptance criteria
- Functional specifications

End Users

Needs

- Simple onboarding
- Reliable recurring payments
- Secure transactions
- Transparent payment history
- Easy schedule management

Payment Service Providers

Needs

- Reliable integrations

- Secure APIs
- Payment monitoring
- Compliance with payment standards

Stakeholder Prioritisation

Stakeholders have been prioritised according to their level of influence and interest.

Manage Closely

- Executive Sponsor
- Product Manager
- Business Analyst
- Software Engineering Team
- Payment Service Providers

Keep Satisfied

- Regulatory Authorities
- DevOps Engineer

Keep Informed

- UX/UI Designer
- QA Engineer
- Customer Support Team
- Marketing Team
- End Users

Monitor

- General users not directly involved in product feedback activities

Stakeholder Risks

Risk	Impact	Mitigation
Conflicting stakeholder priorities	Delayed requirements	Conduct prioritisation workshops
Poor communication	Misunderstood requirements	Establish regular communication schedule
Scope changes	Project delays	Implement formal change management
Limited user involvement	Low product adoption	Conduct regular user validation sessions
Regulatory changes	Compliance risks	Engage regulatory stakeholders early

Stakeholder Engagement Strategy

To ensure effective collaboration throughout the project lifecycle, MoFlow will adopt the following engagement approach:

- Conduct stakeholder workshops during product discovery.
- Hold regular requirements review sessions.
- Validate user stories and acceptance criteria with the Product Manager and Engineering team.
- Engage UX/UI designers during solution design.
- Involve QA engineers during requirements refinement to improve testability.
- Gather user feedback during prototype reviews and User Acceptance Testing (UAT).
- Communicate project progress through scheduled status meetings and dashboards.
- Review stakeholder expectations at the end of each major project phase.

Conclusion

Successful delivery of MoFlow depends on effective collaboration among business stakeholders, product managers, designers, engineers, quality assurance teams, payment providers, and end users. This stakeholder analysis establishes a structured approach for identifying stakeholder needs, defining responsibilities, and maintaining clear communication throughout the project lifecycle.

By proactively engaging stakeholders, aligning expectations, and ensuring that requirements are validated at every stage, the project will be better positioned to deliver a solution that achieves its business objectives while providing meaningful value to users.
